For vaccination of healthy horses as an aid in the prevention of equine rhinopneumonitis due to types 1 and 4 viruses, and equine influenza due to types A₁ and A₂ viruses.
4672 1 dose with syringe

For vaccination of healthy horses as an aid in the prevention of equine encephalomyelitis due to Eastern and Western viruses, equine influenza due to types A₁ and A₂ viruses, and tetanus.
4673 1 dose with syringe

For vaccination of healthy horses as an aid in the prevention of equine encephalomyelitis due to Eastern and Western viruses, equine rhinopneumonitis due to type 1 and 4 viruses, equine influenza due to types A₁ and A₂ viruses, and tetanus.
4674 1 dose with syringe

For vaccination of healthy horses as an aid in the prevention of equine encephalomyelitis due to Eastern and Western viruses, equine influenza due to types A₁ and A₂ viruses, and tetanus.
4675 1 dose with syringe

For vaccination of healthy horses as an aid in the prevention of equine encephalomyelitis due to Eastern and Western viruses, equine rhinopneumonitis due to type 1 and 4 viruses, equine influenza due to types A₁ and A₂ viruses, and tetanus.
4676 1 dose with syringe

Pneumabort® K+1B
The only federally approved vaccine for use as an aid in the prevention of abortion due to EHV-1 infection in pregnant mares. The one rhinopneumonitis vaccine which contains both EHV-1 and EHV-1B. Killed vaccine.
6074 1 dose with syringe

Equiloid Innovator®
This vaccine is recommended for use in healthy horses as an aid in the prevention of Eastern and Western equine encephalomyelitis and tetanus.
5678 1 dose with syringe

Tetanus Antitoxin
Recommended for use whenever a non-immunized animal, or one whose immune status is unknown, suffers a deep penetrating wound that has or may become contaminated with soil. It provides quick but short-term protection. Antitoxin may also be administered to animals following castration, docking and other operations performed on premises where tetanus infection has been a problem.
6078 1,500 units
Prestige® V
Prestige V is a highly efficacious 1 mL dose equine vaccine that provides broad protection against eastern and western encephalomyelitis, rhinopneumonitis respiratory (EHV-1 & EHV-4), equine influenza virus (A1 & A2), including new KY 93 strain and tetanus.
6090 1 dose with syringe

Fort Dodge® Tetanus Toxoid
Use 1 dose for vaccination of healthy horses, sheep and swine. For horses administer 1 ml, repeat in four to eight weeks and revaccinate annually.
4662 1 dose with syringe

Encevac® TC-4
For the immunization of horses against Eastern and Western strains of encephalomyelitis (sleeping sickness), tetanus and flu including KY 93 strain.
6093 1 dose with syringe

Prestige® II
A combination of inactivated purified, concentrated, adjuvanted tissue culture origin equine herpesvirus EHV-1 and EHV-4 and equine influenza virus subtypes A1 and A2, including KY 93 strain. Bayer serological data suggest cross protection against certain U.S. and European strains including Prague 56, KY 63, KY 81 and 87, Fountainbleau 79 and Berlin 84 and 89. For vaccination of healthy horses against respiratory disease caused by equine herpesvirus and equine influenza virus.
5989 1 dose with syringe

Prestige® V+VEE
For vaccination of healthy horses against Eastern, Western and Venezuelanencephalomyelitis, equine influenza virus and tetanus, and as an aid in the prevention of respiratory disease caused by Equine Herpesvirus and Equine Influenza Virus.
6036 1 dose with syringe

Prestige®
For the immunization of horses against EHV respiratory infection (rhinopneumonitis). Rhinopneumonitis is caused by two equine herpesvirus: EHV1 and EHV4. Acute respiratory disease is characterized by fever (104°F to 106°F), depression and a water discharge that gradually becomes thick with a yellow discharge.
5993 1 dose with syringe
